International migration is one of the most controversial political topics today which demands innovative approaches of global and regional governance. The book provides a fresh theoretical framework to understand European responses to the international migration of people and explains the dynamics of Germany’s migration and refugee policy during the last two decades. Against traditional theories and their inherent focus on the national political sphere, the book highlights supranational and multi-level political processes as increasingly important factors to account for national policy changes. Confronted with the most recent developments of international migration, the study offers students and practitioners the necessary background to participate in today’s debates.

Andreas Ette
Senior Research Fellow and Head of Research Group International Migration at the Federal Institute for Population Research, Germany

This volume provides in-depth examinations of a variety of individual, social, and environmental factors that contribute to the success of expatriate employees. Using data from numerous large-scale studies from both the public and private sectors, this volume provides valuable insights into expatriate success with implications for both theoretical understanding and practical management.

Brenton Wiernik
Assistant Professor of Industrial-Organizational Psychology, University of South Florida, USA

Heiko Rüger
Senior Research Fellow, Head of Spatial Mobility Research Group, Federal Institute for Population Research, Germany

Deniz S. Ones
Hellervik Professor of Industrial Psychology, Distinguished McKnight Professor, Distinguished University Teaching Professor, Director of the I-O Psychology Program, University of Minnesota, USA

Whether increasing life expectancy leads to better health remains still controversial. Three topics are explored: (1) vanguard groups which inform about possible levels of health if the general social and environmental conditions were to approach those of the vanguard group; (2) the social and behavioral determinants of health differentiated into proximal and distal factors; (3) vulnerable groups such as migrants and the health differences between migrant groups. Newly available population-based data as well as new study designs and advanced statistical modelling form the basis for the empirical analyses.

Gabriele Doblhammer
Professor of Empirical Methods in Social Science and Demography, University of Rostock, Germany; Executive Director of the Rostock Center for the Study of Demographic Change, University of Rostock and Max Planck Institute for Demographic Research, Rostock, Germany
